Connect your AI

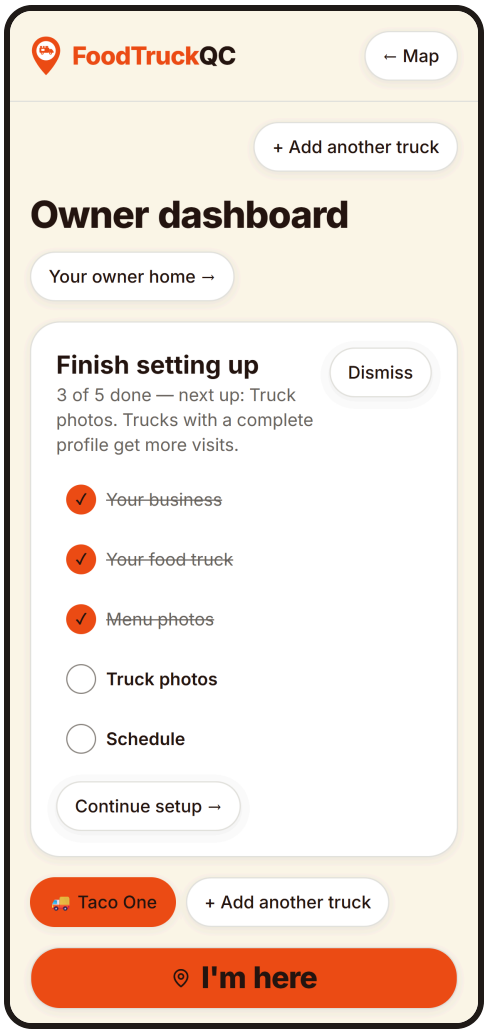

Connect Claude or ChatGPT to FoodTruckQC once, and run your truck by talking: register it, add stops, go live.

💡 This guide follows the video step by step. Each picture shows the exact screen, with an orange circle on the spot to tap.

STEP 1

Owner dashboard — everything here can also be done by voice

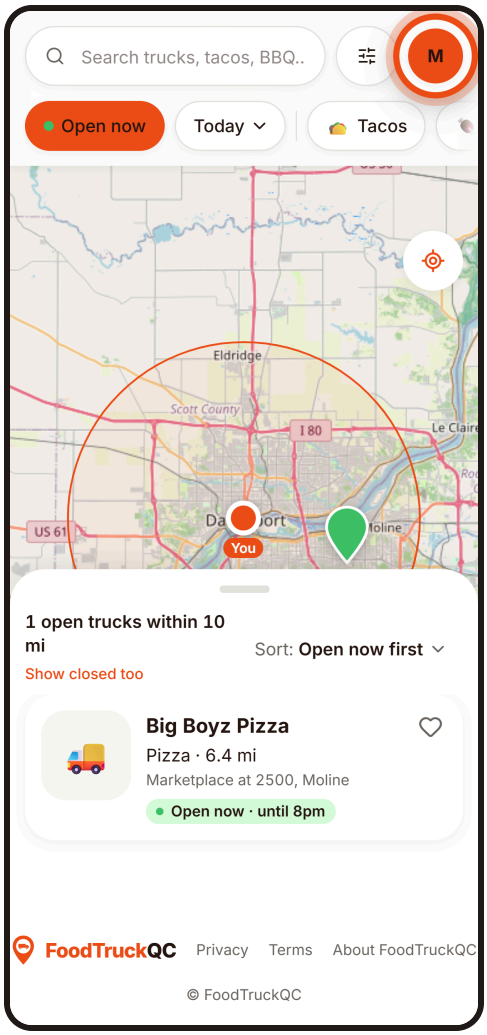

You already talk to Claude or ChatGPT on your phone? Then you never have to tap through forms again. Connect it once, and you can say "I'm here" or "add a stop Friday" out loud. Here's how.

STEP 2

Initials → Profile & settings

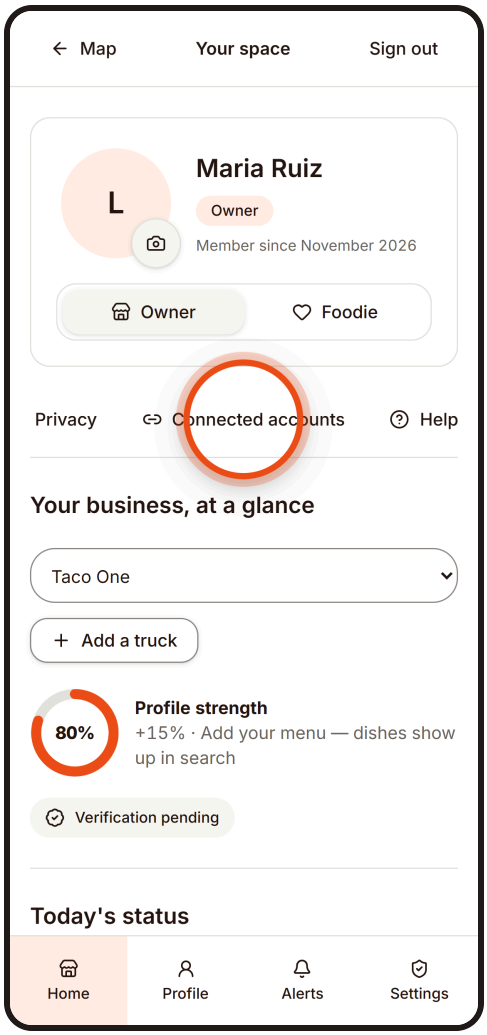

Tap your initials at the top right, then Profile and settings.

STEP 3

Connected accounts → API keys

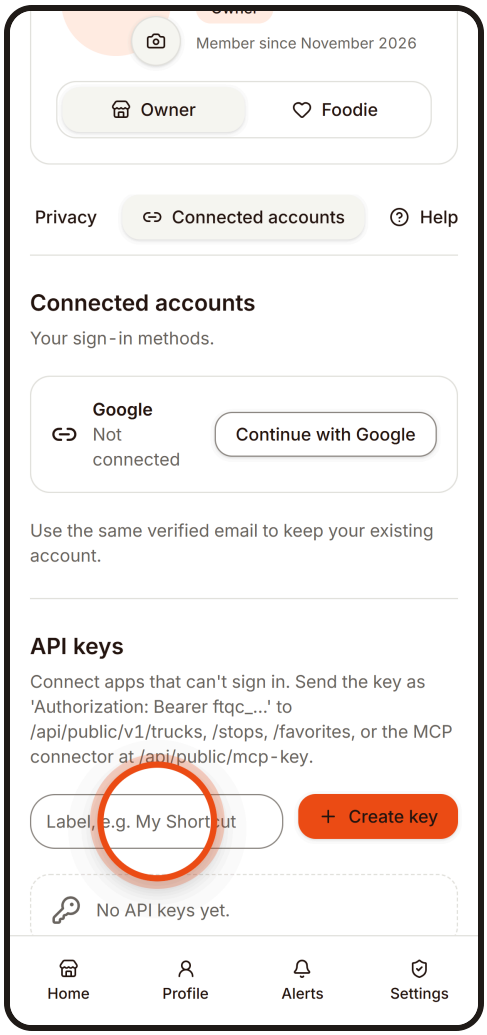

Tap Connected accounts. Scroll down to API keys.

STEP 4

Type a name → Create key

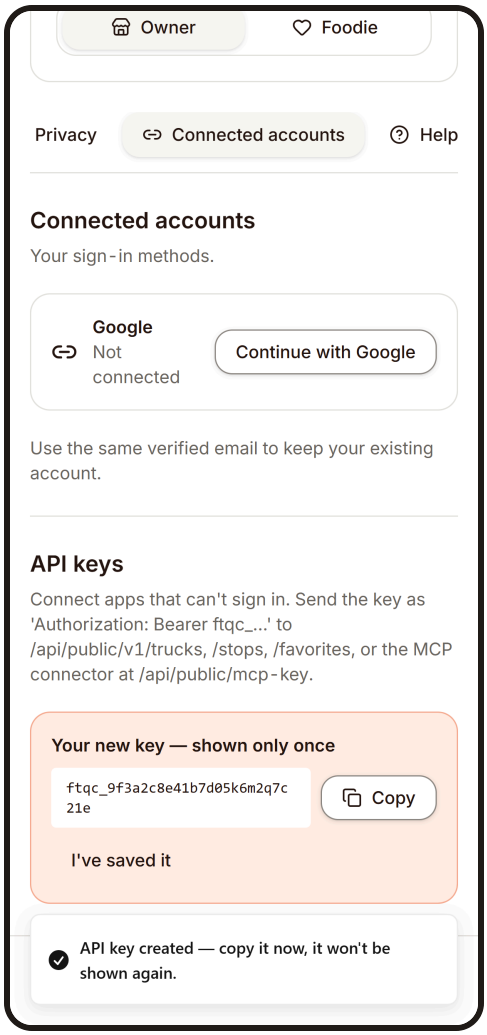

Tap Create key. Give it a name, like "My phone", and tap Create.

STEP 5

Tap Copy — the key is shown only once

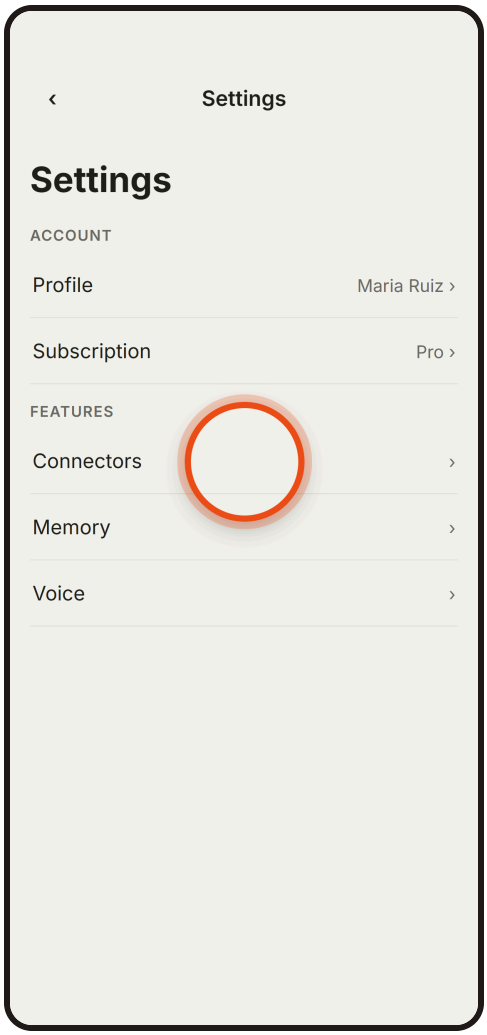

This is your key. It's shown only once, so tap Copy right away. Think of it as a password: anyone with it can change your truck, so don't share it.

STEP 6

Claude app → Settings → Connectors → Add custom connector

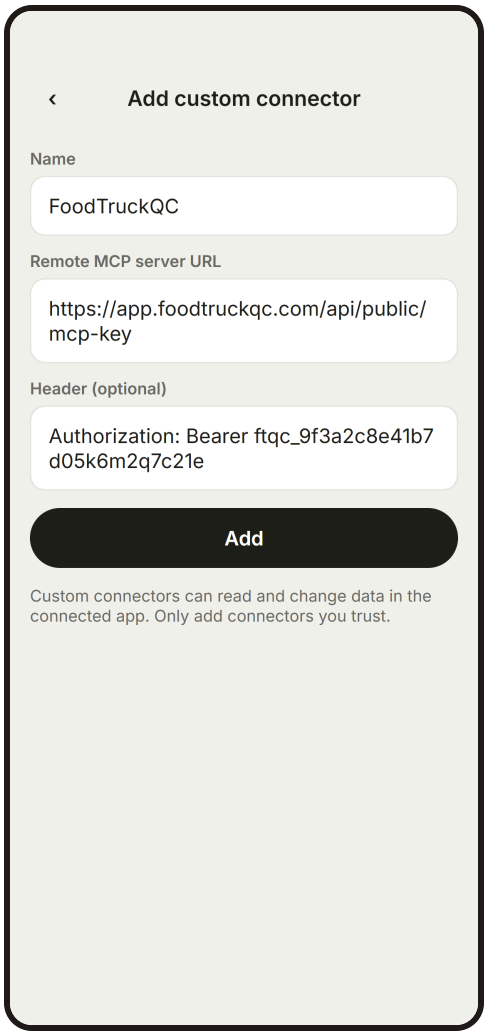

Now open your Claude app. Go to Settings, then Connectors, then Add custom connector.

STEP 7

Name: FoodTruckQC · URL: app.foodtruckqc.com/api/public/mcp-key · Header: Authorization: Bearer <your key>

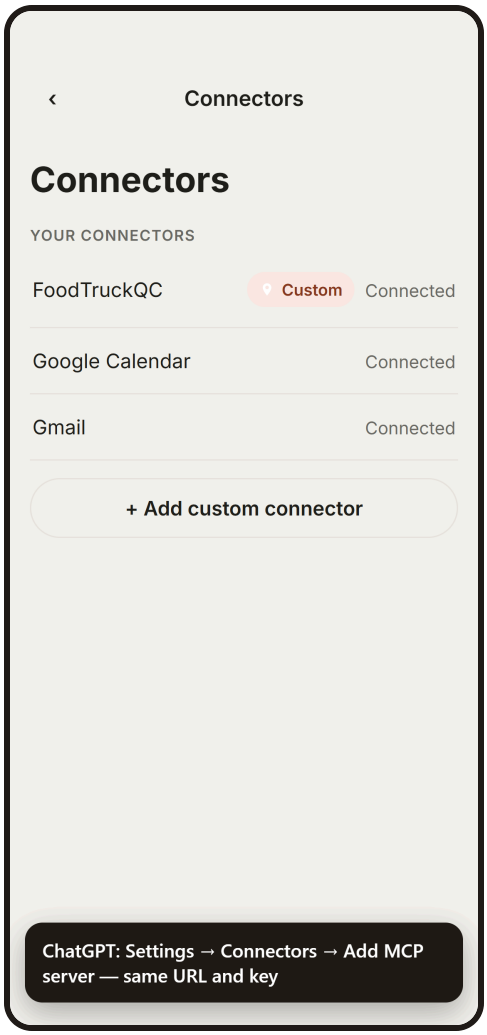

Name it FoodTruckQC. For the URL, type app dot foodtruckqc dot com, slash api, slash public, slash mcp dash key. Then paste your key after the word "Bearer". Tap Add.

STEP 8

ChatGPT: Settings → Connectors → Add MCP server (same URL and key)

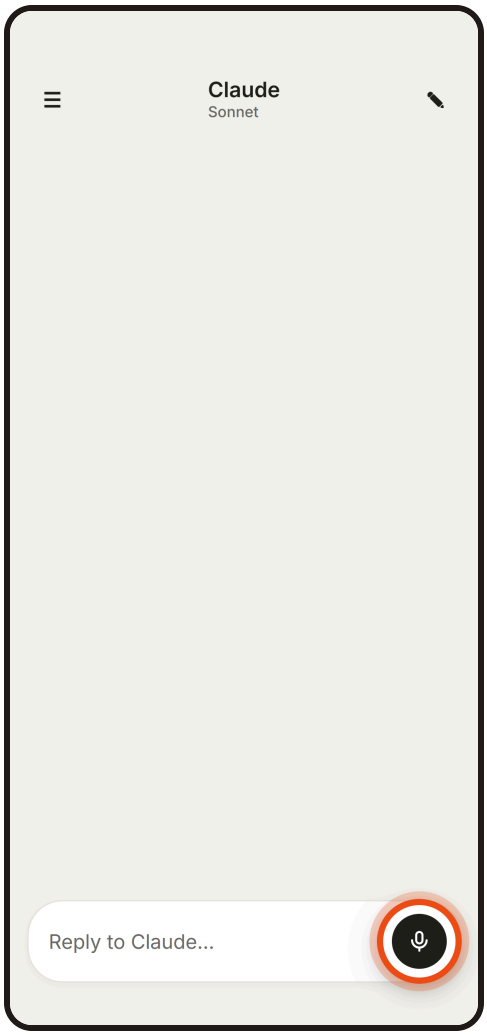

Using ChatGPT? Same thing: Settings, Connectors, add an MCP server with the same address and your key.

STEP 9

Say: “What's still missing on my truck?”

Let's test it. Ask: "What's still missing on my truck?" Your AI reads your FoodTruckQC profile and tells you. It only sees your truck, nobody else's.

STEP 10

Profile & settings → Connected accounts → trash can next to the key

Lost your phone? Come back here and tap the trash can next to the key. The AI stops working the same second.
